ANDROMEDA

About me

Hey you all! I am Ilya, I have been developing for more than 4 years, I have extensive experience in working with startups and automations. I write code on the React in conjunction with TS, because I like strict typing. I am open to new ideas, I actively participate in discussions with the customer, my knowledge of English allows me to confidently talk and discuss ideas on the implementation of various features.

Work Experience

● Andromeda Web

Frontend dev | July 2021 – present

Participated in the development of the project of the American startup [GALAXIS.CO](#)

Stack: Next.JS, Typescript, WebSockets, Sas, Redux Toolkit

Developed an online chat between a buyer and a seller, implemented it on websockets. Also one of the interesting tasks was to create a calendar and task manager. At first, there was a fear that it would not work, but I had experienced mentors seniors who explained everything to me and helped me. We also decided to use a Stripe for the payment. As a result, everything turned out fine, the project is launched and gaining a client base.

Developed a project for hourly rental of offices [Psyarenda.ru](#)

Stack: React.JS, MongoDB, Express.js, SCSS

One of the most difficult tasks was to make an interactive method of cancellations, postponements and renewal of the reservation. I also connected the BEAC payment system on the project. It turned out very well to implement a realtime table with a booking schedule.

● Medinter ex

Front-end dev | Dec 2020 – May 2021

I was developing a fullstack project for automation of accounting systems in the medical department together with back-end developer. The project was quite interesting and expandable as the request from the business was received

Stack: React.JS, Typescript, WebPack, Cs, Redux Toolkit

● Freelance

Full-stack dev | Jun 2018 – Dec 2019

I started my journey, like all frontenders, with the development of cross-browser and adaptive-rubber layout. Then I gradually started looking towards SPA applications, and when I realized that I was ready, I decided to look for a job in the company to get new skills from cooler and more experienced developers.
