ANDROMEDA

About me

Hi! My name is Valery and I'm a front-end developer in the Andromeda team. I like to write clean and readable code. In my free time I am engaged in the development of hard skills. I take an active part in projects with the team. I offer solutions to optimize development processes. I always try to keep in close contact with designers and technicians. leads.

Work Experience

● Andromeda Web

Frontend dev | Mar 2022 - present

I participated in the development of the **Neft.Expert** project

Stack: React.JS , Express.js, MongoDB, CS, Redux Toolkit, WebSockets

Development of a trading terminal for the St. Petersburg International Commodity Exchange.

At the first stage, it was necessary to develop only a terminal, and the site was handled by another team. The terminal was successfully developed in its original form and gradually acquired functionality. Over time, it became clear that the team involved in the site was not doing its job well enough. After the discussion, we also took over the development of the site itself.

</Code>

● CodePandore

Front-end dev | Dec 2020 - Mar 2022

Develop the application interface (I use typescript with return and other libraries), test applications, management tasks, analyze the design (layout in Figma), analyze the TOR and output the necessary tasks for execution; self-organize as tasks may differ from the TOR and the backlog; sometimes communicate with customers and reject, reasonably, their requirements.

Stack: React.JS, Typescript, WebPack, Cs, Redux Toolkit

● Freelance

Full-stack dev | Jun 2018 - Dec 2019

I began my journey, like all frontenders, with the development of cross-browser and adaptive-rubber layout. Then I gradually started looking towards SPA applications, and when I realized that I was ready, I decided to look for a job in the company to get new skills from cooler and more experienced developers.
