

Denis C.

Mobile Flutter Developer

Stack experience 7+ years

Native iOS developer. I believe in the future with Flutter!

I approach the solution of tasks responsibly and with sufficient independence

Key skills

- ◆ Swift
- ◆ iOS
- ◆ Flutter

I study

- Kotlin

Languages

- Russian
- English - B2

ANDROMEDA

About me

Greetings! My name is Denis, I position myself as a Mobile developer with many years of experience. During my career, I managed to participate in more than 20 projects, 15 of which were on the iOS platform. I also managed to work as a chief programmer and technician, so I can safely negotiate with clients about design, prototyping, development.

Stack experience

● Andromeda Web

Lead Flutter Dev | May 2022 - Present

Development on Flutter, iOS and Android.

Stack: WebRTC, gRPC, Firebase (Messaging, Analytics), Redux.

● Dion - discover online (part time)

Mobile Dev | May 2020 - Apr 2022

Development on Flutter on iOS and Android. Technologies were used: WebRTC, gRPC, Firebase (Messaging, Analytics), Redux.

Based on the results, a fully working MVP was developed, which won the All-Russian competition of the Ministry of Tourism.

● NII

Lead Software Engineer | Aug 2015 – May 2022

Solving information security problems: – studying API calls of mobile services (MiTM, Frida);

– studying network traffic and extracting signatures from it to create filtering (Wireshark).

Writing application software for Linux systems network administrators (Python). Assistance in creating a monitoring system (NodeJS, JS).

Preparation of technical tasks for performers of scientific research and technical work on the creation of software and hardware complexes.

● Payday - shopping app (part time)

Lead Developer | Jan 2018 – Mar 2020

Negotiation with the customers at all stages of work (prototyping, design, execution).

iOS app development from scratch (Swift):

– connecting the server REST API;

– connection of maps and geolocation functions (Core Location, Google Maps);

– layout in Interface Builder and in code.

Leadership of the Android developer team. 2 applications with different functionality have been created: client and for cashiers.

Modification of the Android application for cashiers for the Equator platform.

Development of the server part of the service from scratch: – writing backend and frontend backoffice (PHP + Laravel, JS, MySQL);

– connecting the Yandex service.Cash registers;

– writing an API for a mobile application.

(I have decided to rewrite applications using Flutter)

iOS app: <https://apple.co/2WJQ5Rq>

Android application: <http://bit.ly/2Q84kgf>

Android application for cashiers: <http://bit.ly/2QcPV2l>

Back office: <https://pday.online/>

● TeddySpy - parental control (вторичная занятость)

iOS Dev | Feb 2019 – Sep 2019

Firebase Integration (Cloud messaging)

Adding an authorization screen.

Implementation of the functionality of collecting user geolocation data in the background.

Swift.
